

OUTCOMES HEALTH INFORMATION SOLUTIONS

Optimizing the Acquisition and Mobilization of Patient Data

OUTCOMES has a singular goal: to help organizations improve outcomes—simply and organically. The process combines a sophisticated technology process called “eco-scaling” and a highly specialized nationwide workforce with a uniquely strategic product suite. Based on the advanced ODIS™ technology infrastructure, “eco-scaling” powers the efficient deployment of resources to harvest and analyze patient data.

Health Advocacy Programs

Build a climate of trust. Whether it’s educational outreach, a call to welcome a new member or checking in with a new mother, OUTCOMES Health Advocacy Programs help you build that trust—and gather the information you need—one call at a time. No tele-messaging, no contractors; OUTCOMES believes health is personal, and contact should be, too.

After all, a caring connection makes the difference. For instance, data from a previous audit or HEDIS® project feeds a Care Gap Report. It shows a member with diabetes hasn’t seen their primary care physician lately. The OUTCOMES Health Advocate gets the member on the phone, calls the physician’s office at the same time, and the appointment’s on the books. High touch approach, high impact results, better outcomes for all.

Quality is a derivative of a pure approach

Member and patient contact shouldn’t come from generalists or contractors. So we don’t use them—instead, OUTCOMES deploys a nationwide staff of trained experts by specialty so you get quality work that’s leveraged across product offerings.

Health Advocacy Programs

Make a caring connection with grassroots outreach

Efficient by design

Data is touched only once—even for multiple and diverse project initiatives such as Payment Integrity Programs and Health Outcomes Improvement. It’s a great way to re-cycle and re-purpose data. OUTCOMES product suite conserves time and uses staff and data efficiently.

Eco-scaling drives value

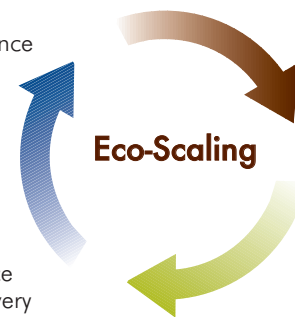

Work from one project can be leveraged across many initiatives.

REUSE...

collect data once for multiple purposes

REDUCE...

the time, expense and effort of leveraging evidence into care delivery

REPURPOSE...

use knowledge gained from chart-based evidence for Payment Integrity Audits, Health Outcomes Improvement and Health Advocacy Programs

Make the Connection:

- New Member Welcome
- Health Risk Assessments
- Prevention and EPSDT Outreach
- HEDIS® Member Outreach
- Care Gap Outreach
- Disease Management Support
- Special Needs Populations Outreach
