

OUTCOMES HEALTH INFORMATION SOLUTIONS

*Optimizing the Acquisition and Mobilization of Patient Data*

OUTCOMES has a singular goal: to help organizations improve outcomes—simply and organically. The process combines a sophisticated technology process called “eco-scaling” and a highly specialized nationwide workforce with a uniquely strategic product suite. Based on the advanced ODIS™ technology infrastructure, “eco-scaling” powers the efficient deployment of resources to harvest and analyze patient data.

### Health Outcomes Improvement

A holistic approach looks at the big picture. Similar to how you look at your members’ health—and at everything that may affect it. Sometimes the data is readily available from a previous project, such as HEDIS® reporting. OUTCOMES can simply re-purpose it to help you determine, for instance, if care management programs are working the way you intended.

But sometimes, those vital details haven’t been harvested yet. Like when a medication is having an unintended adverse effect across a population. Or when it’s time to evaluate an intervention to see if newly implemented standards of care are yielding positive results. Regardless, you need to know the outcomes.

You set the measurement parameters. Give OUTCOMES the questions to ask, let us know what you need to prove or disprove. Our Registered Nurses sift through raw data, extract the elements you need and present the findings that help you fuel care delivery improvement.

### Quality is a derivative of a pure approach

Analyzing care gaps and measuring intrinsic quality shouldn’t be done by generalists or contractors. So we don’t use them – instead, OUTCOMES deploys a nationwide staff of trained experts by specialty so you get quality work that’s leveraged across product offerings.

# Health Outcomes Improvement Programs

Improve outcomes, cultivate quality

### Efficient by design

Patient charts are rich with information, ripe for harvest. Touch it once; use it again and again. It’s a great way to re-cycle and re-purpose data. There’s no need to repeatedly disrupt daily business. OUTCOMES product suite conserves time and uses staff and data efficiently.

### Eco-scaling drives value

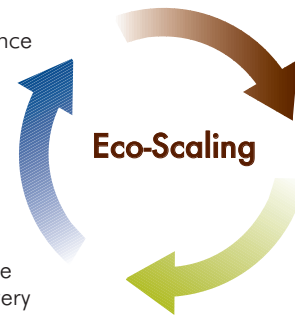

Work from one project can be leveraged across many initiatives.

#### REUSE...

collect data once for multiple purposes

#### REDUCE...

the time, expense and effort of leveraging evidence into care delivery

#### REPURPOSE...

use knowledge gained from chart-based evidence for Payment Integrity Audits, Health Outcomes Improvement and Health Advocacy Programs

### Measure the Difference:

- P4P
- HEDIS® Reporting
- HEDISPro™ —NCQA Certified Software
- State & Federal Initiative Reporting
- Drug Safety & Efficacy Studies
- Credentialing Audits
- Disease Specific Audits
- Customized Studies & Audits
