

ALL SORBENTS ARE NOT CREATED EQUAL.

United Sorbents Contractors Line squeezes the most out of mid-density pads. Unlike many of the lightweight products in circulation, our Contractors Line has more heft and absorbency for the same cost!

We Help You Work Smarter Not Harder.

Spill pads must meet the needs of the job – quickly, efficiently and effectively. And when you start tossing pads like Frisbees to hit that initial spill, **you want maximum coverage and absorbency** – not disintegration. Unfortunately, lightweight pads fall apart when saturated, so you and your crew lose valuable time ‘cleaning up the clean up.’ Our Contractors Line mid-density pads maintain their structural strength.

Reliably Engineered; Precisely Produced.

The market spoke, we listened. But we didn't compromise. We apply the same rigorous production standards to the Contractors Line as for our Premier Line, so you get tough pads with pliable, high tensile strength.

You can rely on United Sorbents.

For maximum coverage and capacity, use our Premier Line. Pound-for-pound, it remains the most consistent sorbent product on the market today.

- Contractors Line Pads
- Melt Blown Oil Only
- Universal Bonded
- Laminated Universal [1 sided]
- Laminated Oil Only [1 sided]
